

Herringbone Installation Overview

The herringbone design is a complex yet simple design that requires some advanced layout to help ensure a successful installation. Preparation of the subfloor is critical and must be very flat. The layout of the room, focal point for the pattern, and direction to run the pattern are all key to the installation and overall look.

Non-Divisible Installation

Non-Divisible products have a width that does not evenly divide into their length. For example, Grain is 7.28 in wide x 47.72 in wide. This creates a gap that causes the herringbone visual to shift during the installation.

Divisible Installation

Divisible products have a width that divide evenly into their length, therefore the herringbone visual remains consistent throughout the installation. Above is an example of Solitude, a 6 in wide x 48 in long divisible product

Non-Divisible Products

- Terrain
- Terrain II
- Hand Drawn
- Uncommon Ground 6"
- Uncommon Ground 4"
- Grain Direct Glue
- Pigment Direct Glue

Divisible Products

- Solitude
- Native Origins
- Intricate
- Unveil
- Rethink
- Surface
- Strand
- Interval

Note that only direct glue products are approved for herringbone installation, products with clicking mechanisms are not approved.
